Art Unit: 1614

Applicant's Response filed July 12, 2004 is acknowledged. Claims 1-16 remain under consideration.

The objection of record set forth in the last Office Action is maintained. There is no period at the end of claim 16. The Examiner can no longer complete this correction. All applications are scanned.

Clarification is requested following Applicant's statement on page 2 of the Response filed July 12, 2004 under Remarks - "Claim 2 has been amended to identify dimensa (disodium 2,2'-dithiobis ethane sulfonate) as a preferred agent".

In the last Office Action the rejection of claims 1, 2 and 4 under 35 U.S.C. 102(b) as being anticipated by Plowman et al., <u>Lancet</u>, was maintained. Plowman teaches the parenteral administration of mesna, a compound of instant formula I, to provide radioprotection at a dose of 400 mg/kg.

Applicant argues Plowman's effective dose is nearly 70 times greater than the dose recommended for IV mesna.

The range recited in instant claim 2, from 0.1 mg/kg body weight to 1,000 mg/kg body weight encompasses Plowman's dose.

Because Plowman teaches the parenteral administration of mesna, a compound of instant formula I, to provide radioprotection at a dose of 400 mg/kg, the rejection of record under 35 U.S.C. 102(b) is maintained.

Art Unit: 1614

Claims 1-4 were rejected in the last Office Action under 35 U.S.C. 103 as being unpatentable over van den Broeke et al., <u>J. Photochem. Photobiol.</u> It was asserted van den Broeke teaches the administration of mesna for UV radiation protection.

Following the amendment to claim 1 in which -- exposure to ionizing radiation -- replaced the original "radiation exposure", the rejection of record under 35 U.S.C. 103 is withdrawn.

Claims 1-16 were rejected under 35 U.S.C. 112, first paragraph, as lacking a clear written description of the invention and of the manner and process of practicing it, in such full, clear, concise and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to practice the same, and, as not setting forth the best mode contemplated by the inventor to carry out the invention.

The claims are directed to methods of treating a patient for exposure to ionizing radiation and of prophylactically treating a patient about to undergo radiation therapy comprising administering a compound of instant formula I, wherein R<sub>1</sub> is optionally "a sulfur-containing amino acid". The specification discloses no examples wherein an amino acid containing sulfur is utilized. This option finds no support in the specification. There is no showing that Applicant had possession of the claimed invention of therapeutic treatments comprising administering a compound of instant formula I wherein a sulfur-containing amino acid is utilized.

Applicant notes the rejection set forth *supra* was not present in the prior Office Actions and cites MPEP 2163.03.

Art Unit: 1614

A new rejection may be set forth at any time during open prosecution. However, upon reconsideration, it clear what compounds are contemplated in the claimed genus of compounds. This rejection of record is withdrawn.

In the last Office Action claims 1-16 were rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The claims are directed to methods of treating a patient for exposure to ionizing radiation and of prophylactically treating a patient about to undergo radiation therapy comprising administering a compound of instant formula I. In the Examiner's view, the specification provides no support specifically directed to treatments wherein an outcome following the administration of such compounds shows any results whatsoever.

Applicant repeatedly argues about the placement of this rejection at this stage of prosecution and repeatedly alleges "incorrect and/or otherwise irrelevant statements and no factual evidence that could even begin to form a *prima facie* case of lack of enablement". Applicant argues results following the administration of a particular compound to treat a particular condition are not required in the presentation of working examples, or any "results" of experiments. The amount of guidance provided in the specification, Applicant alleges, has been ignored. Applicant urges the specification discloses a method of making and using the claimed invention that bears a reasonable correlation to the entire scope of the claims.

Art Unit: 1614

1001, 1006.

Particularly in view of the current rules of practice in the 1600 technology center, the rejection is proper. Further, the state of the art for treating exposure to ionizing radiation is immature. It is reasonable to require evidence that the goal of treating exposure from ionizing radiation comprising administering a compound of instant formula I has been achieved when such an accomplishment has never been attained. *In re Ferens*, 163 USPQ 609. Further, the failure of skilled scientists, whether they are radiologists or

A new rejection may be set forth at any time during open prosecution.

The rejection of claims 1-16 under 35 U.S.C. 112, first paragraph, is maintained. The specification does not disclose a method of using the claimed invention that bears a reasonable correlation to the entire scope of the claims.

medicinal chemists, to achieve a goal is substantial evidence that attaining the goal is

beyond the skill of practitioners in that art, Genetech vs. Novo Nordisk, 42 USPQ2nd

No claim is allowed.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this Final Action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of
